Key to success

The project report should have significant discussions in the following areas:

Business operations
- clearly describe how the selected business process be involved in the business operations
- clearly define the user requirements and business rules in relation to the selected process

Database design
- clearly explain the assumptions and limitations
- show the technical details of the database design that should match with the requirements and business rules

Benefits to the business
- with the help of test results, clearly explain the set of SQL programs by
  - describing the purpose(s) of the SQL programs
  - show the test data and test results
  - explain assumptions thereon or subsequent actions that can be carried out

Future development
- list the areas that have not been handled
- prioritise the future development in high priority, general, and nice to have

- End -
